Application consideration

RCB1709 : GE1

Please keep in mind following points:

- Please culture the cells at **33 degrees C**.
- Cells are grown in low-serum medium (1% FBS) ; therefore, please remove the trypsin solution by centrifugation (1,000 rpm, 3 min, 2 or 3 times) when you subculture.
- Please be careful not to lower the cell density too much at the time of seeding. (Seeding density: 4.0 x 10⁽⁵⁾ cells/ 60mm dish)
- Please subculture the cells before they reach confluence.
 (Preferably about 80%-100% confluence.)

Cell density is low.

Please subculture the cells under this condition.
