

## Application consideration

### RCB1905 : Sq-1

Please keep in mind the following points

- **This cell line takes time to attach to dishes.**  
(Please do not change medium on the next day of thawing.)
- **If cells reach confluence, they are difficult to detach from dishes and become bad condition.**
- **Please subculture cells when they reach 60 to 70% of the surface of culture dishes.**  
(It is preferable that some floating cells be seen like below.)
