Application consideration

RCB0480 : NB69

Please keep the following points in mind.

• If the cells are poorly attached after thawing, please do not change medium on the next day of the thawing, and keep observing them for 1 week without medium change.

• The cells tend to undergo morphological changes and to result in a poor proliferation at a low cell density. Therefore, please be careful about cell density so as not to become too low.

Day 0 (just after plating)

Day 4
